

Building Permits - Frequently Asked Questions

May 2018

Why obtain a Building Permit?

The building permit approval process ensures that construction projects meet health, safety and property protection standards as regulated by the National Building Code and municipal by-laws. Construction should create structures in which it is safe to live and work and should be carried out in a manner that maintains or improves property values. Before a building permit is issued, it must be demonstrated that your proposed construction will meet the building code and local by-law requirements.

When should I apply for a Building Permit?

A building permit is required for all new construction and renovations. The only exemption being non-structural repairs on a structure that contains a maximum of two dwelling units that has an estimated value of construction below \$2,500. Non-structural repairs consist of flooring replacement, painting, eavestroughing, drywall repairs, roofing, retaining walls under 1 metre in height, etc.

An electrical permit from the provincial government is required for electrical work. If the work is of an electrical nature only, the Building Inspector may issue an electrical waiver as the provincial legislation requires that an electrical permit can only be issued if a building permit or waiver has first been issued.

Please apply for building permits or waivers as early as possible since compliance with health, safety and property protection standards in your application must be verified and approved.

How do I apply?

Building permit applications shall be submitted at the front desk service counter at the Village Office located at 584 New Maryland Highway, New Maryland, NB. The Building Inspector will review to ensure that you have submitted all the required preliminary documentation and may need to discuss the application if clarifications are required.

Once all the required information for the permit application is obtained, and the applicable fee received, construction drawings are reviewed for accuracy/completeness and conformance with health, safety and property protection standards as regulated by the National Building Code and municipal by-laws. If additional information, drawings or amendments are required the applicant will be notified and provided with pertinent information to facilitate resolution of such issues.

What is the fee for a Building Permit?

Building Permit fees are based on the total estimated cost of construction of the applicable project. The fees are structured as \$7 per \$1,000 of total estimated cost of construction plus a base fee of \$20. Payment for building permits must be completed at the time of application and can be paid by either cash, cheque or debit.

What are some other Important points to remember?

- A building permit must be issued prior to commencing any work.
- All work must comply with all applicable Village by-laws and provincial/federal regulations;
- Do not deviate from the applicable by-laws or from the conditions of a permit or omit work that is required by the by-laws or other conditions of a permit.
- Building permits expire one year from the date of the issuance, and all work must be completed within one year of the date on the permit.

When is the seal of the Architect or Professional Engineer required?

In the case of buildings which exceed 600 square metres in building area or three storeys in building height, or which are used for assembly, institutional, or hazardous industrial or commercial purposes, the Village Building By-Law provides that no permit shall be issued unless the plans and specifications are certified under the seal of an architect or professional engineer registered to practice in the Province of New Brunswick. Engineered designs may also be required in accordance with other specific provisions of the National Building Code of Canada.

When do I need to arrange for an inspection?

Applicants are asked to notify the Building Inspector in advance of required inspections as follows:

- Give at least two full working days' notice of the intention to start work on the building site;
- Give one full working day's notice prior to the placement of any foundation footings;
- Give one full working day's notice where a foundation wall below land surface has been placed and before any backfilling of the excavation has been carried out;
- Give two full working days' notice for a pre-drywall inspection consisting of a structural, insulation and vapour barrier inspection; and
- Give notice within 10 days of completion of the work described in the permit.
